EXPERIENCE

05/2023 - Present

Backend Developer

PT Infosys Solusi Terpadu ↗

As a Backend Developer for Bank CIMB Niaga's OCTO Mobile, I led a small team to deliver multiple enterprise-scale banking features, including fraud detection, insurance integration, and automated payment systems. Focused on building secure, high-performance, and scalable backend solutions using Java Spring Boot, PL/SQL, and OpenShift within an Agile environment.

Key contributions include:

- Developed and integrated a fraud detection feature to enhance transaction security and prevent suspicious financial activities.
- Implemented system integration with Sun Life Insurance, ensuring seamless communication between financial systems.
- Built an auto-debit feature for BPJS Kesehatan payments, simplifying recurring health insurance transactions for customers.
- Developed a transaction installment conversion feature, enabling users to split payments flexibly through the mobile app.
- Contributed to the digital-to-physical credit card generation feature, allowing customers to request physical cards directly via OCTO Mobile for improved convenience.

12/2021 - 02/2023

Backend Developer

PT Multidaya Integra

I have extensive experience working with various technology stacks in a project-based company environment. I am proficient in programming languages such as Java, Python, and Node.js, and I implement agile development methodologies daily. My contributions include:

- **Bea Cukai:** As a backend developer, I created REST APIs for frontend consumption, documented them using Swagger, and managed and designed database tables. I utilized technologies such as Java Spring Boot, Oracle, and HBase.
- **TNI AL:** I was part of a team developing a microservice for the Decision Support System Application. In my backend role, I contributed to implementing forecasting and scoring with data analytics and integrating these features with the frontend. The technologies I used included Python Flask, OpenSearch, and the Onyx Big Data Platform.
- **BPOM:** In this project, I served as a DevOps Engineer, optimizing deployment in the development environment by providing a CI/CD pipeline. I created Dockerfile scripts to containerize both frontend and backend applications and managed Linux servers to ensure separation across different environments.

This experience has honed my skills in both backend development and DevOps, allowing me to effectively contribute to diverse and complex projects.

EDUCATION

03/2024 - Present

Information Systems Program

Universitas Terbuka

06/2017 - 05/2020

Math & Science

SMAN 2 Semarang

High School Diploma

CERTIFICATES

03/2023 - 03/2026

Cloud Practitioner Essentials (Belajar Dasar AWS Cloud) ↗
Dicoding
